Technology to thrive in a complex financial world

Markets are transforming and the rules that govern them are changing. The financial ecosystem is rebalancing to a new way of working, driven by regulation, technology, computation capacity and digitalization.

The pressure on IT systems to not only keep up, but to actively support agility, innovation and growth, is mounting.

For over 35 years we have been developing market-leading technology solutions for trading, risk and operations teams. The success and learnings from our experience continue to inspire and drive us today and in the future.

Leading capital markets technology

Our flexible and open technology platform, MX.3, sits at the center of your IT infrastructure, working with your existing systems and the wider capital markets ecosystem.

Enabling IT transformation

IT systems are no longer hidden behind the scenes; your infrastructure has a direct impact on how your business operates and the decisions you make in real time. Fragmented and legacy systems landscapes can no longer keep up with the constantly changing financial markets. Unrelenting pressure on margins and results means the cost of making significant change is often avoided.

Everything we do at Murex is focused on enabling our clients to transform their IT in a way that manages cost, resource and business impact.

A unique modular platform approach

MX.3 acts as an agile foundation for your IT infrastructure, connecting business processes and powering operations with advanced and specialized native business solutions for trading and analytics, post-trade and risk management. It is designed to work for capital markets, providing functional depth and openness to meet the evolving needs of all market participants, across the sell-side and the buy-side, from top-tier global institutions to regional banks and investment firms.

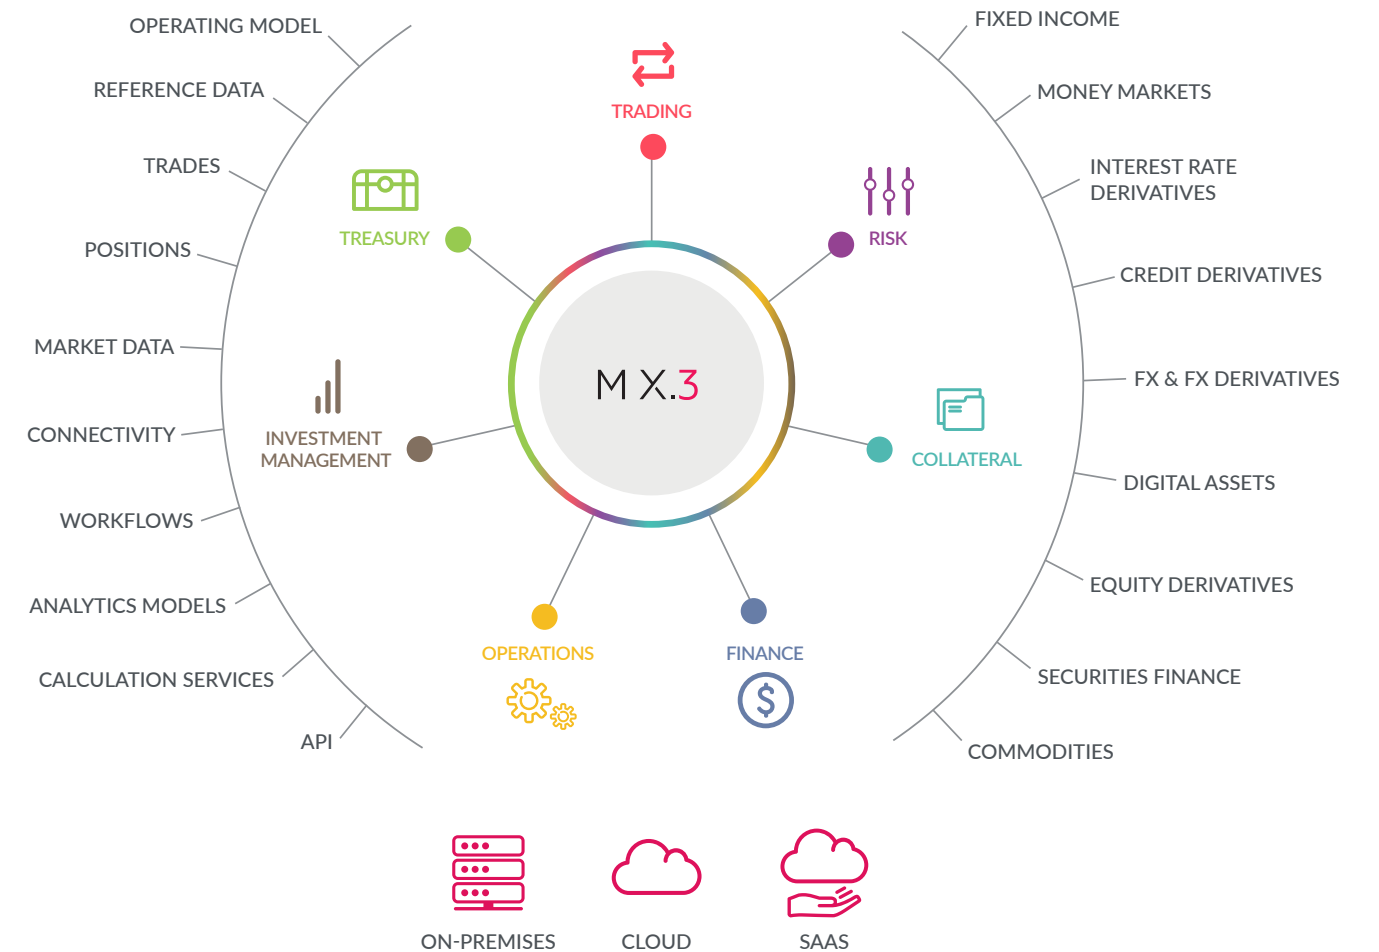

MX.3 uniquely provides depth and breadth of functionality and coverage from one platform, unlike other approaches that rely on a patchwork of multiple systems. Data points are shared, processing is centralized and systems are aligned, giving you a global view of your business.

Immediate and tangible value

For our clients, this delivers greater agility, efficiency and optimization of operations, models and business processes. With a streamlined infrastructure, data can be shared, processed and consolidated more efficiently across your business. This reduces operational risks and costs, giving you greater control over margins and profitability, which allows you to invest in your future development.

Access to accurate and consolidated information allows you to make business decisions in real-time. The platform's agility enables you to expand your global business, entering new markets and delivering new services while enabling regulatory compliance through the entire value chain.

Discover MX.3 One platform, multiple solutions

Advanced business functionality

MX.3 provides best-of-breed functionality covering the whole chain, with unmatched coverage across all asset classes.

From trading and post-trade operations to risk management, our business solutions combine fit-for-purpose features with enterprise-level capability.

Trading

The continuing transformation of capital markets means that financial institutions must also transform: reassessing trading strategies, adapting product sets and rethinking distribution channels. All of this must be managed within a high volatility environment.

MX.3 for Trading helps our clients evolve and succeed in this changing landscape. It provides market-leading functionality for every business line, across sales and trading, with comprehensive coverage from risk-based pricing and structuring to real-time portfolio management and P&L analysis.

Our solution offers the most complete product mix in the industry with more than 350 payoffs, along with the flexibility to create new products.

It allows our clients to respond rapidly to market opportunities, supporting complex legacy books when required. It also enables electronic distribution and connectivity functionality to support trading execution and clearing.

Advanced front-office analytics, with native integration of trading and risk measures give you a consolidated view of risks and assets in real time. This means you can make trading decisions informed by real-time risk data to optimize capital usage and risk charges, and help increase your profitability and transparency at all stages along the value chain.

We continually enhance our technology to ensure that it addresses the latest market requirements, including new regulations and standards such as the LIBOR reform.

Recognized as one of the leading front-office solutions across asset classes and business lines, MX.3 for Trading gives users the necessary tools to transform their front-office business processes and stay competitive in a changing financial ecosystem.

Enterprise Risk Management

Capital markets are rebalancing to a new normal. Changing regulations are impacting how financial firms manage their business operations and generate revenues. Regulation has also redefined risk and collateral management: risk must now be embedded in front-office and collateral processes.

MX.3 for Enterprise Risk Management (ERM) is designed to help financial institutions optimize their risk infrastructures and reduce the cost of compliance. The cross-asset, cross-function platform provides a new model for risk and collateral management, enabling institutions to control and monitor risk at every step of the value chain. It can be used as an integrated trading and risk solution, or a full enterprise risk management platform that integrates with your existing trading systems.

Our ERM solution provides a high-performance architecture and advanced calculation engine to cater to internal risk management and regulatory compliance across market, credit and liquidity risk. Our calculation engine capabilities include historical VaR, Monte Carlo simulation, PFE, XVA, non-cleared OTC derivatives and more. As one consolidated and central platform, it unifies data repositories, valuation and risk engines, giving you a holistic view of your risk at pre- or post-trade level. This enables the optimization of internal processes to control and manage total cost of trading; consolidates risk reporting for efficient compliance; and influences real-time trading and business decisions to optimize capital investment. Stay competitive by effectively managing risk, while optimizing capital, assets and liquidity.

Ranked N°1 Wholesale Banking and Treasury Solution
IBS Intelligence has named Murex and MX.3 as the top selling wholesale banking and treasury solution in its Sales League Table 2022 for the fourth year running.

MX.3 for Trading is recognized as the leading cross-asset front-office solution in the capital markets.

Advanced business functionality continued

The Murex Risk and Regulatory suite delivers specialized functionality covering FRTB, CVA Capital Charge, SA-CCR, cleared and bilateral margining, and XVA management, in one consistent cross-regulatory platform. It is available as a standalone solution or as part of the MX.3 for ERM offering.

The flexible platform can easily adapt to the changing risk landscape. MX.3 for ERM enables you to meet regulatory deadlines, rapidly anticipate business impact and more easily adapt to future developments.

FRTB solution of the year and Market Risk Management solution of the year in the 2022 Risk Market Technology Awards.

Enterprise Collateral Management

With the global financial markets under increasing regulatory pressure and scrutiny, collateral management has become a vital step in the trading process. EMIR, Dodd-Frank and Basel/IOSCO have re-defined what it means, with risk calculations now embedded in collateral activities and collateral volumes significantly increasing. This is ultimately forcing a move towards more integrated functions, which means institutions are remodeling trading and operations processes, as well as re-engineering legacy infrastructures.

MX.3 for Collateral Management is designed to simplify this method by centralizing collateral across functions and business lines for bilateral or cleared OTC, repo or securities lending, and exchange-traded derivatives products. This includes the calculation of CCP margins and bilateral BCBS/IOSCO WGMR margin rules, as well as firms' own risk methodologies. Our exception-based workflow manager enables intra-day margining and high STP across the collateral chain, including connectivity with key market infrastructure.

MX.3 features an enterprise inventory manager for cash, security and commodity positions. It is synchronized in real time with positions, market data and settlement events from multiple sources, solving the fundamental collateral management challenge of timely data aggregation. This enables global visibility and resource sharing by providing a holistic overview of collateral management exposure. It helps the development of strategies for collateral allocation and funding optimization, asset lending transformation, and internal cost allocation.

MX.3 for Collateral Management offers a single framework for enterprise-wide margining, optimization, compliance and collateral trading

MX.3 for Collateral Management overcomes inefficiencies in your organizational management by offering a single framework for enterprise-wide margining, optimization, regulatory compliance and collateral trading. It is designed to be flexible enough to support changing regulatory requirements while centralizing and simplifying them, ensuring that your business meets the needs of a constantly evolving compliance landscape.

A SWIFT certified application, MX.3 for Collateral Management is available as a standalone solution or integrated with MX.3's trading, operations and risk solutions.

Operations

In a changing financial ecosystem, market participants are under pressure to evolve operating models, moving to higher levels of automation to increase efficiency, reduce operational risk and optimize costs.

MX.3 for Operations provides a cross-asset framework for streamlining standard and bespoke business processes and helping solve the challenges of fragmented or obsolete legacy infrastructures. It is designed to meet the specific operational obstacles of FX, securities and derivatives operations.

Full deployment of MX.3's business workflows leads to the highest STP rates in the industry. They cover the full cycle from price discovery and trade, to document and settlement processing, and hedge accounting, delivering operational excellence at every stage. MX.3 seamlessly integrates with execution and clearing platforms, ensuring transparency and real-time monitoring.

Advanced business functionality continued

The solution facilitates regulatory reporting with functional coverage supporting EMIR, Dodd Frank Act and MiFID II / MiFIR, and can easily adapt to new business processes and regulations.

MX.3 Securities Settlement is a SWIFT certified application.

Ensure agile and efficient processes with MX.3 for Operations, enabling you to adapt to new opportunities and navigate the challenges of today's capital markets.

Finance

As capital markets evolve, firms are having to adapt their accounting processes. Front office, risk and finance must be increasingly aligned to control capital usage, which has a direct impact on financial statements and regulatory reporting.

MX.3 for Finance is designed to help institutions manage these changes and control accounting in an efficient, cost-effective and compliant way. Leveraging the cross-asset, modular functionality of the MX.3 platform, it helps simplify, automate and streamline your accounting processes.

The MX.3 Accounting Ledger functionality covers full life-cycle management. This includes intraday accounting journal, trial balance with manual adjustments, accounting period management, financial tracking and feed to General Ledger. It leverages front-office and risk calculation engines for valuations, accruals and amortizations. Benefit from reduced time-to-market with new product accounting coverage in one platform, offering the widest product range in the industry.

MX.3 for Hedge Accounting is an end-to-end solution covering micro- and macro-hedge accounting from trade booking to financial statements, giving you a full and transparent view of the accounting chain.

It includes functional coverage across fair value and cash flow designation, retrospective and prospective effectiveness measurement, reporting and accounting. It is built to easily connect with your existing systems and infrastructure, reducing implementation costs. Automated and fully integrated business processes, including trade management, risk calculation, reporting and sub-ledger solutions, reduce operational costs and increase efficiency.

Our accounting solution facilitates compliance with international accounting standards on IFRS 9 / IAS 39, ASC 815 and IFRS 13 marginal CVA allocation, with simulated and analytical CVA / DVA natively computed in the MX.3 risk engine and posting of the marginal CVA allocation processed automatically in the accounting engine.

Control your capital usage and ensure compliance with MX.3 for Finance; a smart technology platform for new accounting standards.

MX.3 for finance is designed to help institutions control accounting in an efficient, cost effective and compliant way

In a complex and changing environment, capital markets firms must reinvent themselves to succeed. At Murex, we have the technology, experience and expertise to help them do just that.

Advanced business functionality continued

MX.3 for Treasury rationalizes operational processes around a single data source, avoiding unnecessary reconciliations

Treasury

With current market conditions, treasury departments have risen to the top of banks' investment priorities. More than ever before, there is a need to secure wider funding sources, review pricing rules and implement tighter risk, liquidity and collateral controls. As traditional systems struggle with new market demands, MX.3 for Treasury is designed to meet the complex requirements of the treasury function.

Where bank treasuries often rely on several different systems, MX.3 combines all aspects of the function to provide an integrated overview of your positions. It consolidates your money market trading and banking book exposures, as well as submissions from all investment activities on one platform. This enables central and local funding needs to be managed holistically and avoids the high integration costs of unifying disparate systems.

MX.3 for Treasury enables compliance with the latest regulatory requirements around liquidity ratios, hedge effectiveness and VaR. Analysis is delivered in real-time and integrated at every step of the funding value chain, meaning treasurers benefit from accurate analytics, advanced risk monitoring and precise measurement.

The solution rationalizes operational processes around a single data source, avoiding unnecessary reconciliations between the front and back offices, and risk functions.

Its powerful business workflows deliver a high level of automation along the entire value chain, increasing efficiency and giving you better control of operational risk and costs.

A SWIFT certified application, MX.3 for Treasury meets and exceeds the demands of today's treasury department offering comprehensive functional coverage.

Investment Management

Investment strategies have evolved, embracing broader product ranges that lead to higher returns, while simultaneously increasing risk and complexity levels. To support that evolution, investors are seeking an alternative to traditional systems.

MX.3 for Investment Management (IM) provides financial institutions with an innovative technology alternative. Buy-side clients rely on MX.3 to aid decision making; sophisticated risk modeling and performance analysis enable increased control throughout the investment life-cycle. Portfolio diversification is delivered through immediate and seamless access to any product type, across an unparalleled range of asset classes.

Our portfolio management solution includes a real-time dashboard to create, analyze and execute any investment strategy. Position keeping, order and cash management, and compliance are all integrated to increase operational efficiency and reduce risk.

Real-time risk simulation and investment optimization features provide managers with tools to monitor portfolio risk and performance attribution.

MX.3 for IM supports compliance throughout the entire investment cycle, covering regulatory, internal and investment requirements, which are monitored in both pre- and post-trade. The ability to easily access holdings, cash balances, risk and performance figures for in-depth analysis of your underlying positions enables better regulatory reporting. As a single source of data across business units, our solution provides transparency for both clients and regulators.

Investment management strategies are evolving to increase returns and manage compliance. MX.3 for IM is a flexible and comprehensive solution that gives investors a powerful alternative to traditional investment systems.

Next generation technology

MX.3 is designed to meet the needs of capital markets participants today, as well as providing an agile and scalable foundation for future development and change.

Our suite of flexible business solutions is powered by advanced core MX.3 technology. This means users benefit from the rich breadth and depth of functional coverage, while centralizing processing and calculations, sharing data points and aligning systems, resulting in technological efficiency and high performance.

MX.3 is based on a tiered architecture designed for simplicity and flexibility. It is built to support client specific customizations and integrations. Solutions can be extended to embed proprietary processes and calculations, including defining new product types or adding custom analytics, while benefitting from the platform's generic risk and lifecycle functions or parallelization mechanisms for faster time to market.

CPU and GPU grids combined with in-memory aggregation deliver high performance, to handle vast amounts of data and complex requirements, while reducing your overall hardware footprint and controlling TCO.

Deployment of MX.3 is flexible with on premise or cloud options. It is cloud-compliant to take advantage of the flexibility, scalability and cost-reductions of the cloud with public or private models.

Leveraging years of project and support expertise, Murex also provides comprehensive SaaS services, bringing leading security and availability to the management of your MX.3 application and infrastructure.

MX.3 operates on a global model to deliver 24-hour trading and continuous processing with a consistent experience and performance for all users.

Murex is committed to continual change and embracing new standards and methodologies in technology development. Our continued development of MX.3 will enable you to work digital-first, embracing the most innovative technology including APIs, and allowing you to operate in a more efficient way to focus on performance and business growth.

1,500
trades per second on FX cash business
Position refresh latency <100ms in traders' screens

10,000
Full exposure and margin call calculations on 10,000 contracts in less than 7 minutes

200,000
swaptions per second evaluated on 1 core CPU

Murex is committed to continual change and embracing new standards and methodologies in technology development

Dedicated and flexible support services

We work in close partnership with our clients to deliver IT transformation. Our global service offering is designed to provide the right level of expertise and support at every stage.

Leading technology requires outstanding services

The MX.3 platform provides an unrivaled capital markets experience at a controlled cost. MX.3 supports a wide range of business solutions that rely on a single, integrating front-to-back-to-risk platform. It is deployed seamlessly across on-premises infrastructures, cloud and SaaS. The platform leverages best-of-breed standards to provide a robust, secure and performant architecture.

Murex offers a full suite of support tools and services, from implementation through to upgrades and focused training. These are designed to help our users make the most of MX.3 and maximize the impact on their business.

Each one of our clients is supported by a dedicated client service team, ensuring continuity at every stage while bringing together the right skills and knowledge for each project. Worldwide, Murex support works as one team, leveraging local and client specific knowledge underpinned by global quality, consistency and expertise.

Upgrade as a Service (UaaS)

Murex issues a new release of its MX.3 platform each quarter. With the hundreds of new or enhanced features introduced in each release, upgrading MX.3 yearly allows financial institutions to continuously develop their business. Concurrently, they better manage risks, control costs, improve performance and achieve regulatory compliance. Murex Upgrade as a Service (UaaS) ensures adopters stay ahead of security, market, regulatory and technology compliance. They keep pace with digitalization transformations. UaaS also drives the evolutions of third-party systems because

MX.3 is at the heart of financial institution IT systems landscapes. UaaS is a key part of Murex continuous evolution services. These services maximize MX.3 benefits, from implementation to extensions through upgrades and continuous support.

With UaaS, financial institutions:

- Accelerate business extension and digitalization, enabled by new MX.3 versions.
- Run MX.3 on a technical stack that is always up to date on security, operating system, RDBMS, JDK and more.
- Adopt new native features and reduce maintenance efforts.
- Stop technical debt accumulation that results from workarounds.
- Convert and smooth upgrade costs from an unknown capital expenditure whose occurrence is unscheduled into a fixed and controlled yearly cost.
- Refocus key resources on business innovations and high-value missions.

With UaaS, Murex:

- Builds a regression test pack (RTP) designed and operated by Murex to reproduce the client's unique MX.3 platform usage across functional, nonfunctional and interface domains
- Anticipates changes already managed by the UaaS factory with other clients.
- Detects specific changes impacting customer usage early on.
- Explains and documents the customer use cases that result from the new version in an impact note.
- Adapts existing customizations so the client can continue to use them with the new release.
- Provides a deployment guide of the new release adapted to the client environment.

Murex UaaS enables seamless business evolutions and strategic readiness with frequent, timely, on-budget MX.3 upgrades, leveraging platform innovations. With UaaS, key client resources can be refocused on business initiatives.

Customers running MX.3 on-premises, on the cloud or in SaaS can subscribe to Murex UaaS.

Center of Expertise

The Center of Expertise is the primary MX.3 knowledge repository. Murex clients use this resource to maximize their return on investment in the platform.

It helps clients build and grow their MX.3 expertise at their own pace, anytime and anywhere. The digital-first approach for knowledge acquisition and development enables client teams to master the MX.3 solution across functional domains, asset classes and technical settings.

Murex: Your partner for IT transformation

Murex is the technology partner of choice for capital markets, working with financial institutions in over 60 countries to adapt and evolve their IT systems.

A history of innovation

For over 35 years, we have been at the cutting edge of technological innovation for capital markets. We have invested over \$1bn in the last 10 years in the design, implementation and evolution of integrated trading, risk management, processing and post-trade solutions. The result is MX.3, our award-winning, third generation technology platform. More than 57,000 users around the globe rely on our platform every day. As capital markets continue to rapidly evolve, we will continue investing to make sure that our clients, our company and our people can do the same.

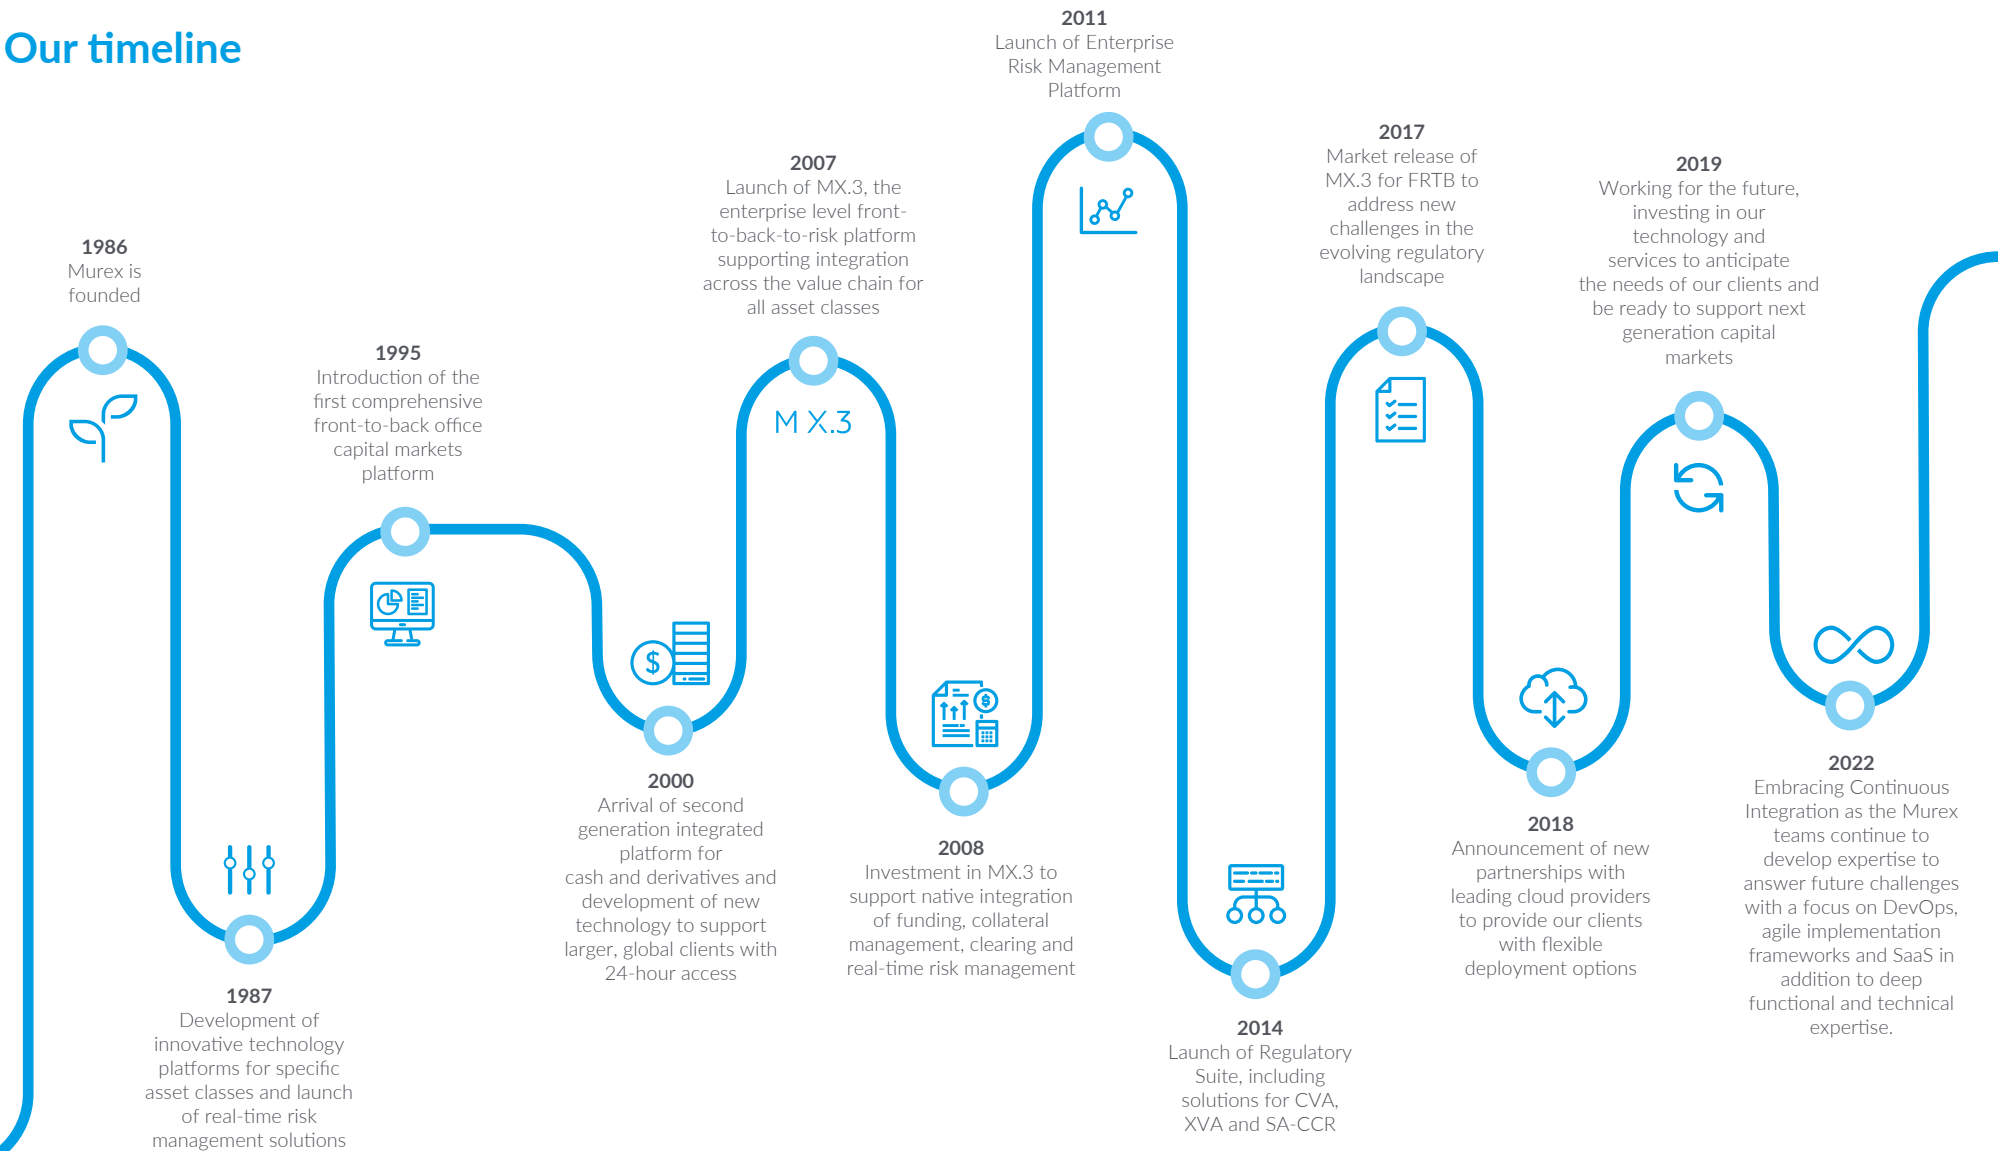

A passion for finance, a talent for technology

Our technology is designed to help our clients respond to the challenges they face today and build foundations for the future.

Our people – At Murex, we recognize that only by supporting our people’s creativity in exploring new ideas and approaches, can we continue to lead in capital markets technology. That creativity is grounded in 35 years of experience, and financial and technological expertise.

Partnership – Our services are based on a foundation of long-term partnership, aimed at supporting our clients’ growth now and in the future. That collaborative approach isn’t just for our clients; we partner with industry providers, bodies and influencers, as well as other technology companies, to ensure we are at the center of market changes, understand what that means for our clients, and are best positioned to respond.

Our timeline

Your partner for IT transformation continued

Who we work with

Murex partners with capital markets participants across all segments, with the comprehensive functional coverage of MX.3 enabling us to deliver high quality business solutions to meet our clients' different objectives while optimizing efficiency and profitability.

The banks

With its extensive product mix, flexibility and best-of-breed functional coverage, MX.3 is the preferred capital markets technology for the sell-side. It's open architecture and advanced business solutions enable global banks and market makers to accelerate transformation of their business processes and easily implement best market practices.

For leading multi-regional, regional or local banks, MX.3 is a unique platform solution covering the whole value chain across asset classes, with emerging markets coverage to support global expansion or entrance into new markets.

For all our sell-side clients, MX.3 enables IT infrastructures to be streamlined, delivering increased efficiency and reduced operational costs.

The investment managers

MX.3 is a comprehensive technology solution for buy-side institutions, providing leading functionality covering the front and back offices and risk from one platform. It's best-of-breed cross-asset portfolio management system enables asset managers and hedge funds to take full control over the investment life-cycle and manage portfolios and inventories in real-time, supporting operational and regulatory performance. The platform provides an IBOR containing data from multiple sources, delivering an independent view of positions, limits, risk and performance for informed decisions.

MX.3 is a powerful OTC platform for pension funds and insurance companies, with advanced treasury and order management functionality, while covering balance sheet management and liability driven investment capabilities.

For the buy-side, MX.3 helps optimize business processes to respond quickly in rapidly changing markets.

Market infrastructure

MX.3 is a robust, high performance platform trusted by global market infrastructure firms.

Its multi-asset management margining and clearing capabilities are used by the world's largest swap clearer for its OTC business.

It accelerates the roll-out of evolving margin calculations, segregation models, multiple connectivity to CCPs and reporting requirements to help clients build competitive services in a fast-changing industry.

Bank utilities and central banks can drive efficiencies and reduce TCO with a consolidated platform solution covering front-to-back-to-risk, with reserve management functionality for central banks.

MX.3 helps market infrastructure firms adapt to the latest market conditions and rationalize operations on a single platform, delivering efficiency and control across the value chain.

Corporates

Our corporate clients utilize MX.3's extensive capital markets functionality to build stronger risk management, centralize funding, and implement regulatory and internal compliance. From dealing with EMIR reporting and hedge accounting, to managing FX exposure and controlling commodity risk, the platform delivers best-of-breed capabilities at an affordable cost.

Energy and commodities

Energy and commodities market participants using MX.3 benefit from a global view of physical, financial risks and inventories across base and precious metals, agriculture, oil and refined products, and power and gas.

With lessening post super-cycle margins, volatility and regulatory pressure increasing the cost of commodities trading, MX.3 is an enterprise solution to help optimize business processes and decision making.

Awards

The performance of MX.3 is widely recognized by analysts and industry publications, with consistent award wins reflecting our advanced business solutions and high standards of client service.

Chartis Research RiskTech 100 2022 - Eight overall in the RiskTech Rankings 2022 and Industry Category Leader for Sell-side Market risk and Integrated Trading & Risk Management.

Gartner - A leader in the Gartner Magic Quadrant for Trading Platforms since 2011*

Risk.net - FRTB Product of the Year and Market Risk Management Product of the Year in the 2022 Risk Market Technology Awards. Best Support for LIBOR Reform in 2021.

WatersTechnology - Best Use of the Agile Methodology in the Buy-Side Technology Awards 2021, and Best Integrated Middle-Office Platform in 2020.

Asia Risk Magazine - Winner of 4 categories in the 2022 Asia Risk Awards, including Technology Vendor of the Year

Partners

At Murex, we work with a global network of partners to provide best-in-class technology and the highest standards of delivery. From large multi-service providers to local specialists, we trust our partners to cater for the varied needs of our clients wherever they are in the world and whatever their requirements.

Dedicated Murex Alliance Managers work with our partners at every level to define strategy and manage collaboration, ensuring our clients benefit from the right expertise at every stage of a project.

System Integrators

Our System Integration partners provide a full range of services, from specialized expertise and consultancy to fully managed outsourcing. Murex System Integrators are tiered in three levels: Alliance Partners and Business Partners have significant MX.3 service capabilities either globally or in specific regions and are actively managed by Murex's Alliance Management Team, while Associate Partners provide skilled MX.3 resources on an ad-hoc basis.

Technology Partners

Murex teams up with technology partners to deliver innovative solutions to clients. From operating system to cloud computing,

Murex clients anticipate and benefit from rapid technological evolution.

With more than 70 partners around the world, Murex clients have access to a talent pool of over 4,500 experienced consultants.

Connectivity Partners

We invest in pre-packaging connectivity between MX.3 and relevant third-party platforms to help reduce deployment cost and accelerate implementation time to market for our clients. Our connectivity offering spans all stages of the data sourcing and trade processing life-cycle. It covers market and reference data platforms, execution, post-trade processing, clearing and settlement, as well as regulatory reporting platforms across asset classes and geographies.

The complete list of Murex Partners is available on murex.com.
